

## GMO Soybeanextractionmeal-Feed HP

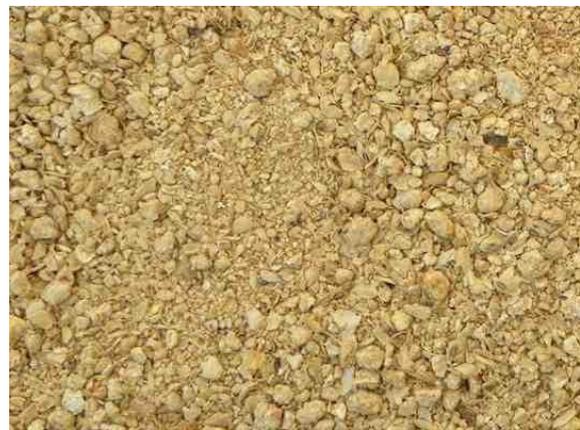

(Produced from genetically modified soybeans)

Product No.: DMH-P10

### Product description:

GMO Soybeanmeal HP is a byproduct of the production of GMO soybean oil. The hulls are removed from the GMO soybeans before the crushing commences. The removal of the high fiber hulls increases the protein content and proportionally lowers the content of fiber. Through extraction of the oil a GMO soybeanmeal HP is produced. GMO Soybeanmeal HP is a high energy feed and is mostly used in poultry, pig food or in the milk producing feed industry.
